

Make Mirror part of every learning activity, for every student, every day

Make math relevant

[When you set up a reflection based on math learning objectives on Mirror](#) the prompts are automatically generated to help students make connections between math and the world around them. It also encourages them to acquire the reflective skills they need to persevere through challenging math problems.

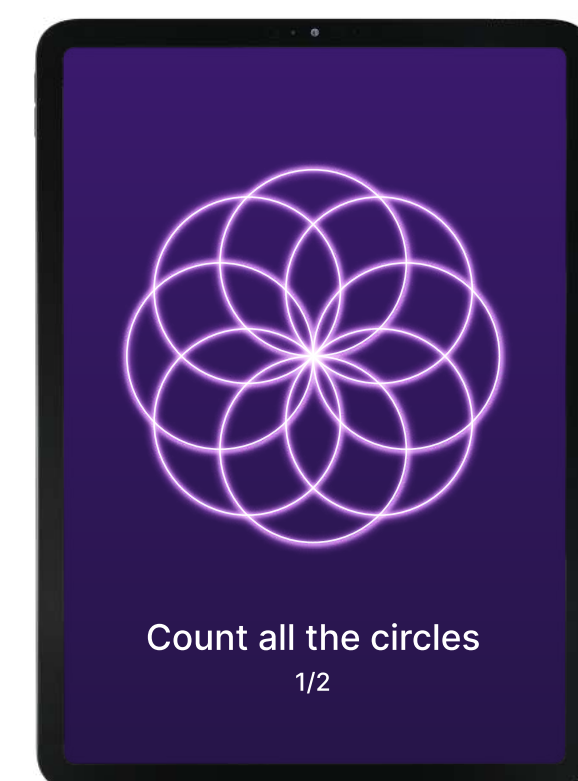

Improve writing with verbal reflection

The verbal feedback Mirror gives students instantly also helps them improve by conveying a summary of their thoughts in writing, demonstrating to students how to make stronger writing choices on future assignments.

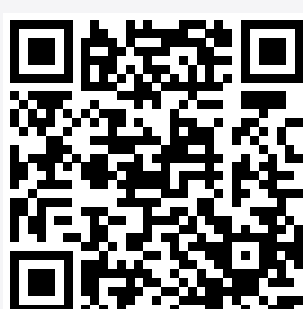

Practice calm and mindfulness

At the end of every reflection, Mirror offers students a Recharge exercise: a brain break that calms or energizes depending on which one the student chooses.

Keeping hands-on STEM projects

During labs, Mirror is your students' guide on the side. Organize students into small groups and set up a Reflection with a [Workspace](#).
